

ABHINAV ANAND

AI/ML Engineer | Data Science Engineer

abhinavanand9996@gmail.com | Jalandhar, Punjab, India | [Portfolio](#) | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Second-year B.Tech Computer Science (AI/ML) student at Lovely Professional University (CGPA: 7.0), with hands-on experience designing and deploying end-to-end machine learning applications from data pipeline to production UI. Proficient in Python, Scikit-Learn, PyTorch, and Streamlit, with growing expertise in deep learning (CNNs), agentic AI, and generative AI frameworks including LangChain and LangGraph. Comfortable across the stack — building FastAPI backends, engineering features from raw data (Pandas, SQL), and communicating insights through Matplotlib and Seaborn. Actively building a portfolio of GenAI and agentic-AI projects while seeking an internship to apply ML, data science, and full-stack skills in a real-world setting.

EDUCATION

B.Tech — Computer Science (AI/ML)

Aug 2025 – Aug 2029

Lovely Professional University • Punjab, India | CGPA: 7.0

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL, C, C++, HTML, CSS

ML / Deep Learning: Scikit-Learn, PyTorch, Deep Learning, CNN, Pandas, NumPy, K-Means, Logistic Regression, NLP, Feature Engineering

GenAI / Agentic AI: Generative AI, Agentic AI, LangChain, LangGraph, FastAPI

Data Visualization: Matplotlib, Seaborn, Streamlit

Web Development: FastAPI, Tailwind CSS, Responsive Web Design

Tools & Platforms: Git, GitHub, VS Code

PROJECTS

CreditWise — AI Loan Risk Intelligence System [Live ↗](#)

Python | Logistic Regression | Streamlit | Feature Engineering | Scikit-Learn

- Built an end-to-end ML pipeline for loan approval prediction using Logistic Regression with feature engineering on financial data, achieving high classification accuracy across risk tiers.
- Designed an explainable risk-scoring system to classify applicants into Low / Medium / High risk tiers, improving interpretability for lender decision support.
- Deployed as a real-time Streamlit web application, enabling interactive scenario testing by non-technical stakeholders.

AI-Powered Customer Intelligence System [Live ↗](#)

Python | Scikit-Learn | K-Means Clustering | Streamlit | Pandas

- Developed a customer segmentation pipeline using K-Means clustering to identify distinct shopping behaviour patterns across purchase history data.
- Generated personalised product recommendations based on cluster analysis, directly linking behavioural segments to business actions.
- Built and deployed an interactive Streamlit dashboard enabling business stakeholders to explore customer segments in real time.

Developer Portfolio v2 [Live ↗](#)

HTML | Tailwind CSS | JavaScript

- Designed and developed a fully responsive developer portfolio applying Glassmorphism and Neural Aesthetic design patterns for a premium user experience.
- Optimised for cross-device compatibility and fast load performance with clean, maintainable code structure.

KEY STRENGTHS

- Strong problem-solving mindset — skilled at breaking down complex ML systems into efficient, deployable solutions.
- End-to-end product thinking: from raw data and model training to user-facing, deployed web applications.
- Fast learner actively upskilling in agentic AI, generative AI (LangChain, LangGraph), and deep learning architectures like CNNs.
- Collaborative approach — eager to contribute to teams that value quality engineering and data-driven decision making.
